The True GDM-49F-LD two-section freezer merchandiser has a non-peeling, non-chipping black powder-coated exterior. This freezer display merchandiser's colorful, illuminated sign panel catches customer attention, increasing impulse sales of packaged frozen dinners and other convenience foods. Sturdy, aluminum frames

support triple-pane glass doors with easy-grip handles and a self-closing feature. Magnetic door gaskets help maintain a constant -10 degrees Fahrenheit to keep frozen food and ice cream solid.

The refrigeration system has a fan motor that goes into a unique reverse mode for 20 seconds upon start up to remove dust, dirt, and debris from the condensing coil. Keeping the coil clean promotes efficient system operation, saves energy, and ensures temperatures inside are consistent. Even though this feature prolongs the lifespan of the system's components, it won't eliminate routine preventative maintenance and cleaning requirements.

This glass door display case has a bottom-mounted condensing unit that is accessible for maintenance and raises merchandise to eye level. A capillary tube system holds and releases the R290 refrigerant, a hydrocarbon option that is environmentally friendly. Evaporator coils are coated with epoxy to resist corrosion, while its floor rack and backguard enhance airflow. To keep stabilize the freezer on uneven floors, leg levelers are included.

In the cabinet, eight adjustable shelves display product, which is completely visible with LED lights and a bright white interior. Equipped with an automatic defrost system, the True GDM-49F-HC~TSL01 two-section freezer display case eliminates ice buildup, starting based on a time clock and finishing when the temperature is at the right level. Evaporator and condenser fan motors are electronically commutated so they use minimal energy and create little heat as they move air.
